

Case History

PROJECT SUMMARY

Client	Boral
Location	Brisbane, Queensland
Colour	Light Grey (N35)/Various
Area	Unknown
Installer	The Epoxy Coating Specialists

COMMENTS

- To prepare and clean the heavily contaminated surface, a high-pressure hot water rotary clean was administered, followed by a diamond grind.
- The Kevlar®-reinforced Jaxxon 1525 was then applied and broadcast with aluminium oxide for a non-slip texture, followed by a topcoat of Jaxxon 1525 to encapsulate the particles and fully seal the floor.
- Also included line marking to make the floor more functional. The light grey colour of the floor not only tidied the appearance of the factory, it also brightened the area considerably.
